Attention: Mr. John Leemon

Dear Mr. Leemon:

Enclosed is a map pertaining to a portion of our New Kathleen Field, Fidelity Mine #11, DuQuoin, Illinois we propose to mine during the next three years. As you will note, this area is adjacent to and part of a contiguous parcel within our Fidelity mining area.

Any water discharged as a result of mining operations, or any surface water runoff will be intercepted by a drainage ditch at the extreme south end of the proposed mining area. Water from the drainage ditch will empty into an existing pit at the extreme west side of the area to be mined. Presently, and for some time to come, the water from this pit is pumped to the tipple and recirculated back again to the same pit.

Coal mined from the proposed area will be hauled to the present preparation plant for processing.

We are operating under Illinois EPA No. 1973-MD-8-09. We also have received a Surface Mining Permit No. 568-79 from the Department of Mines and Minerals.

Sincerely,

Peter E. Spartin

Peter E. Spartin
Vice-President, Surface Operations
